

#### ABSTRACT

The invention relates to gaming equipment for table games using playing cards, in particular for Black Jack and makes it possible to increase a speed of game and automatically control the observance of rules of a game. The inventive gaming equipment comprises a playing table provided with a cover divided into sectors for players and a dealer playing place and sections for placing cards faceup, a shoe-type element for storing and distributing playing cards, a system for supervising the game provided with a device for detecting the presence of objects on the playing table, a data storage unit and a computer provided with an electronic data processing system which is programmed according to the rules of a game. The dealer-playing place is provided with an additional credit control unit and a unit visualizing the player orders. The game supervising system is also provided with units for controlling the bets of the players and game control units disposed in each player sector.
